

No Limit? No Problem!

Fly Safer with Standby Flap System Limit Switches for your Caravan!

- When your primary flap system fails, the standby flap system may be used in its place.
- As installed, there is nothing to protect the structure from over extending the system at either the upper or lower end of the flap travel.
- When the system is over extended structural damage WILL occur.

ASIC is here to help with a modification to the system that is already installed. The newly installed switches will serve to limit the travel of the existing standby system. Protecting you from any unintentional damage.
